PREFACE	i
MAP - COLORADO COUNTIES	ii
MAP - COLORADO PLANNING REGIONS	iii
SECTION I - Historical and Projected Industry Information	1
Graph: Average Annual Employment Growth Rate - 1983 to 1988 - Colorado	3
Narrative: Colorado Industry Employment Outlook	5
Major Industry Division Employment Forecasts - FY's 1989-1991	13
Estimated Industry Employment by Place of Work: 1989-1994	14
Graph: Major Industry Representation, United States - 1977 and 1987	15
Graph: Major Industry Representation, Colorado - 1977 and 1987	16
Graph: Growth Rate Comparisons of Private Nonagricultural Wage and Salary Employment, United States and Colorado - 1982-1988	17
SECTION II - Occupational Information, Colorado and the United States	19
Narrative: Labor Market Developments and Occupational Outlook	21
Top Ten and Bottom Ten Occupations in Terms of Growth, Colorado and the United States	23

Occupations Estimated to be in Oversupply, Colorado - July 1988 through December 1988 24

Occupations Estimated to be in Undersupply, Colorado - July 1988 through December 1988 27

SECTION III - General Demographic Information, Colorado and the United States 31

Estimated Labor Market Data Summary - FY's 1988-1991 33

Population by Age, Sex, and Race/Ethnicity, Colorado - April 1980, FY's 1989 and 1990 34

Population Projections by County, Colorado - FY's 1989 and 1990 35

Estimated Employment Status by Race/Ethnicity and Sex, Colorado - FY 1989 37

Individuals Requiring Employability Services - FY's 1989 and 1990 38

Estimates of Substantial Segments of the JTPA-Eligible Population - Program Year 1989 39

Public School Pupils and Dropouts by JTPA Service Delivery Area - 1987-1988 40

Estimated Number of Persons in Poverty by County - FY 1989 41

Estimates of Youth Population and Labor Force, Colorado by County - FY 1989 42

Estimated Youth Labor Force by Race and Hispanic Origin, Colorado - FY 1989 45

Colorado Veteran Population by County, April 1980 and and March 1986 49

Colorado Labor Force Estimates by County
Annual Average 1987 51
Annual Average 1988 52

Graph: Annual Average Unemployment Rates, United States and Colorado - 1977-1988 53

Per Capita Personal Income by County - 1981-1986 54

Graph: Per Capita Personal Income, United States and Colorado - 1981-1986 56

Consumer Price Index, United States and Denver-Boulder Area - 1984-1988 57

SECTION IV - Employment Service Data 59

Over-the Year Change Analysis of Services to Individuals - FY's 1987 and 1988 61

Employment Service Field Operations Goals for Program Year 1988 62

Job Service Applicants by Occupation - First Half, FY 1989 63

PREFACE

This publication was prepared by the Labor Market Information Section of the Colorado Department of Labor and Employment, in cooperation with the Employment and Training Administration , U.S. Department of Labor. It is published annually and is designed to provide historical, current, and projected labor market information for Colorado and various regions within the State. For the reader's convenience, the report is divided into sections based on subject matter and geographical location. The first section contains narrative, graphs, and tables on major industry employment in Colorado. The second section focuses on particular occupations and occupational groups. Section three contains general demographic information, including personal income data, labor force and population by race/ethnicity, and the poverty population. Section four contains data from the Department of Labor's Employment Service. Following section four are eleven separate sections, each of which contains labor market information on a particular geographic area of the State. Ten of the areas coincide with Service Delivery Areas under the Job Training Partnership Act.

Comments, suggestions, and questions regarding content and format are invited and may be addressed to:

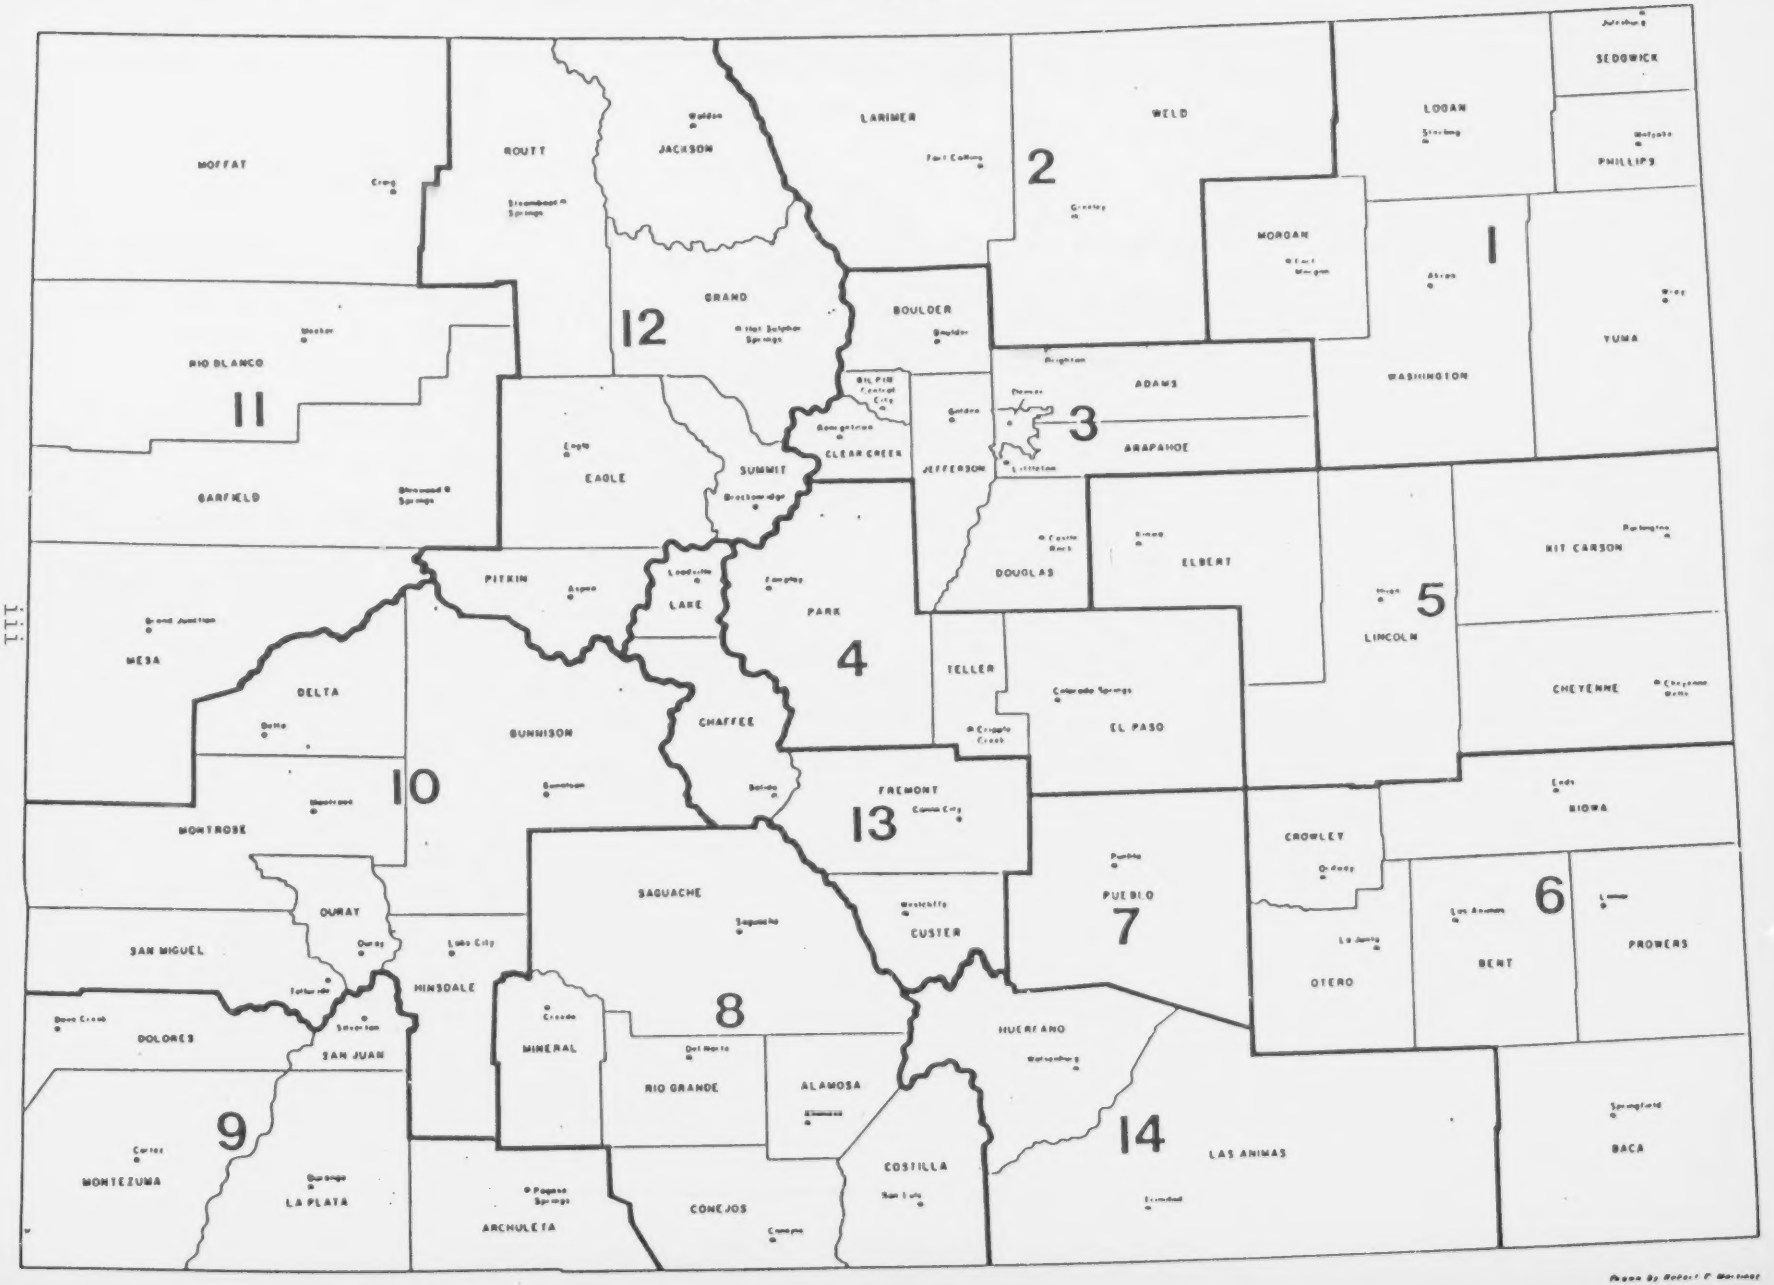
STATE OF COLORADO



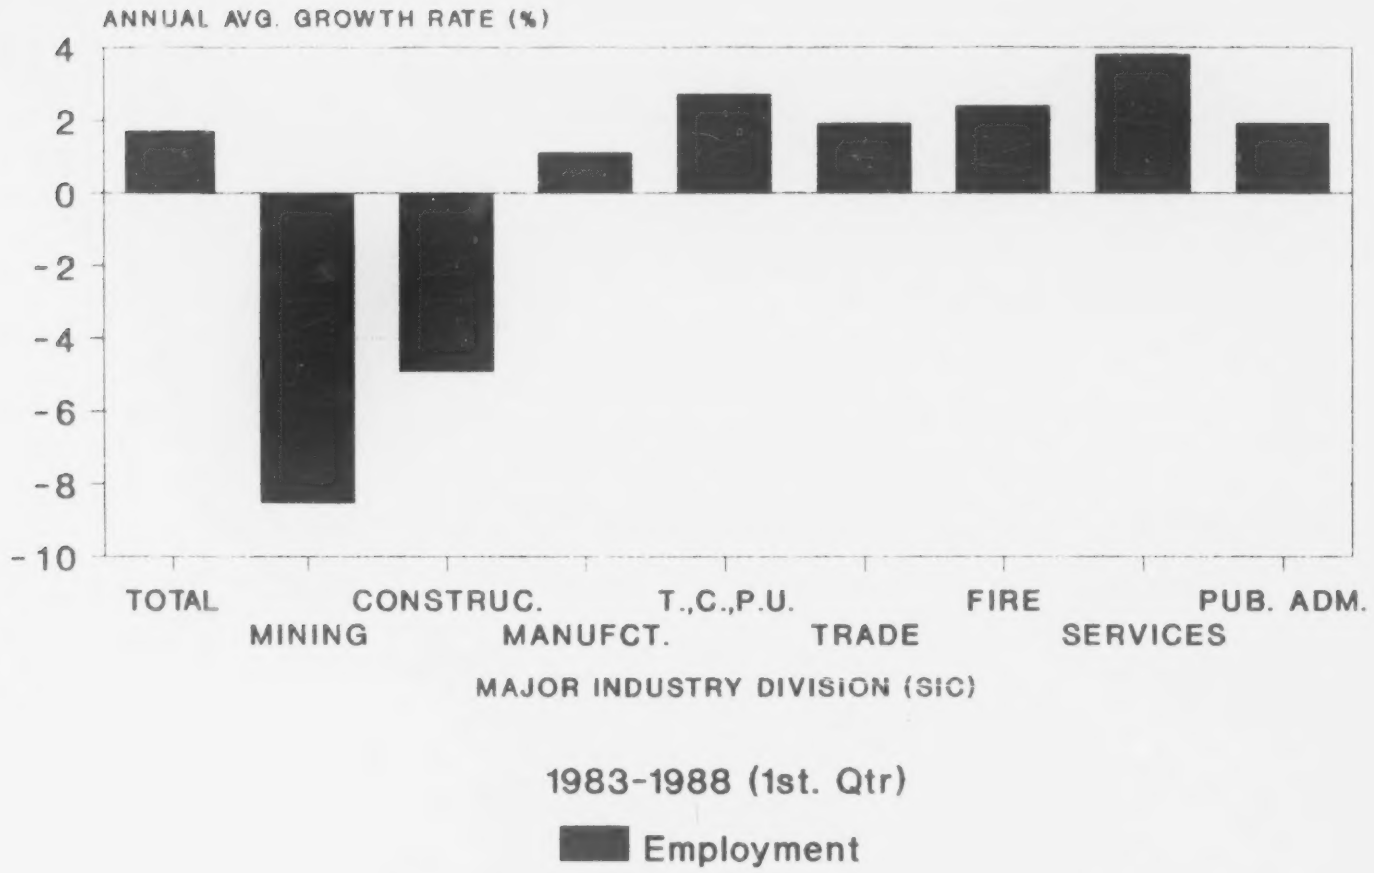
SECTION I

HISTORIAL AND PROJECTED INDUSTRY INFORMATION

COLORADO AND THE UNITED STATES

This section contains narrative, graphs and tables on employment by major industry division in Colorado and the United States.

INDUSTRY GROWTH RATES
STATE OF COLORADO



SOURCE: COLORADO DEPT. OF LABOR,
ES-202 DATA SERIES.

Summary of National Economic Activity in 1988

The nation's gross national product (GNP) expanded by 3.8 percent in 1988. This represented the strongest rate of growth in GNP since 1984. Of the total $148 billion increase in GNP in 1988, nearly half ($70.2 billion) came from an increase in personal consumption expenditures. However, given that consumption expenditures represent a 65 percent static share of GNP, the increase in consumption was lackluster. Another component of GNP that exhibited a sub-par performance was government purchases of goods and services, which contributed less than one percent of the growth in GNP despite representing a 20 percent static share. The strongest components of GNP in 1988 were gross private domestic investment, which contributed 31.8 percent of the growth (with an 18 percent share) and net exports (20 percent of the growth, -2.6 percent share).

The above scenario can be explained by three fundamental trends that were occurring in the national and international economies in 1988: 1) the downward trend in the value of the dollar that began in early 1985 led to increasing exports by making U.S goods and services relatively less expensive in foreign markets; 2) the increasing health in the economies of most of our major trading partners; and 3) the increasing rate of capacity utilization in many major industries. Declining margins of excess capacity and increasing sales led many businesses to increase their investment in plant and equipment in order to ensure adequate production for the future.

Monetary policy in 1988 can be characterized as restrictive. The broad money measure M2 increased by only one percent during the first three quarters of 1988 over the same period in the previous year. The Federal Reserve Board also took active measures to restrict the supply of money, such as raising the federal funds rate (the rate that banks charge one another for borrowed funds) and raising the discount rate (the rate that banks pay to borrow funds from the Federal Reserve Bank). The goal of this restrictive monetary policy is to weaken aggregate demand in the short run by raising the cost of credit. This goal stems from a belief that an increasing rate of inflation imposes a higher cost to society than slower growth.

The rate of inflation in 1988, as measured by the consumer price index for all urban consumers, was 4.4 percent. This was equal to the 1987 rate. Average weekly earnings increased by 3.5 percent in 1988; thus inflation-adjusted average weekly earnings fell by 0.9 percent.

The federal budget deficit declined by over $20 billion (current dollars) in federal fiscal year 1988 as receipts rose at a greater rate than expenditures. On the expenditure side, transfer payments and net interest paid on the national debt increased by $26.5 billion and $11 billion, respectively. However, governmnent purchases of goods and services fell by

$18.6 billion.

Nearly 3.7 million non-agricultural jobs were added to payrolls in 1988, compared with 2.8 million new jobs in 1987. Approximately 21 percent of the new jobs in 1988 were in goods-producing industry divisions (mining, construction, or manufacturing) while the remainder were in service-producing industries (transportation and public utilities; finance, insurance, and real estate; trade; services; and government.)

Other significant economic events in 1988 include the agricultural drought and the new agreement by the Organization of Petroleum Exporting Countries (OPEC) to limit oil production and thereby drive up prices. The reduction in farm output due to the drought led to an eight-tenths of a percentage point reduction in GNP in 1988, as well as accelerated growth in food prices. The new OPEC agreement also led to higher energy prices by the end of the year.

Outlook for the National Economy in 1989

The following section provides a broad outline of the national and international macroeconomic milieu that is expected to exist in 1989. These assumptions underlie our industry and employment forecasts (page 13) for fiscal years 1989 and 1990.

The economies of most of our major trading partners (Canada, Japan, Mexico, and Europe) are expected to experience strong growth in the coming year. This should lead to continuing growth in export markets for U.S. producers.

Interest rates in the United States are expected to increase in 1989, primarily as a result of two related factors: 1) a continuing restrictive monetary policy on the part of the Federal Reserve board and 2) the demand on the part of foreign investors for higher interest rates to help finance the U.S. budget deficit.

Partly as a result of higher interest rates, the dollar is expected to rise in value relative to the currencies of our major trading partners. The rise in the dollar's value is expected to have only a slight effect, if any, on the U.S. trade deficit.

The rate of increase in the Consumer Price Index is expected to be around 5.5 percent in 1989, or about one percentage point higher than in 1988. Major components of the index that are expected to show the greatest increases are energy, food, and health care.

The Gross National Product is expected to increase by about 2.8 percent after inflation in 1989. Business investment and export growth will lead in contributing to growth in GNP. The rate of increase in personal consumption expenditures will be in

the two-three percent range, while government purchases will increase by barely one percent.

Colorado Industry Employment Outlook

The following narrative is intended to support the "Major Industry Division Forecasts" on page 13. Two major assumptions underlie these forecasts. First, positive net inmigration will resume in fiscal year 1990, partly as a result of job growth in fiscal years 1988 and 1989. Second, given the highly politicized climate surrounding the new airport at this writing, it is assumed for the purpose of these forecasts that construction of the new airport will begin in fiscal year 1991.

The Mining Division

The mining division lost 500 jobs in 1988. However, the decline appears small when compared with an average annual job loss of 4200 jobs in the five years prior to 1988. In fact, there were signs of higher production in some sectors of the mining division in 1988. According to the Colorado Mining Association, production of coal, molybdenum, and gold was up in 1988. Employment also increased slightly in coal and gold mining.

Employment in oil and gas extraction declined by 400 jobs in 1988. Employment will fall further in 1989, as major oil producers continue to implement cost-cutting measures. The new OPEC agreement caused oil prices to rise in late 1988 and early 1989, but the increase is not expected to stimulate appreciable exploration in Colorado.

Coal mining was one of the few industries that benefited from last summer's drought. The drought led to reduced production of hydroelectric power, producing a "substitution effect" in favor of coal-generated power. Between the second quarters of 1987 and 1988, coal mining employment increased by 120 jobs.

Denver is a favorite location for the headquarters of many gold mining companies because of its convenient geographic location and relatively low office leasing rates. Profit margins in gold production are high, but the industry does not account for a large proportion of the mining jobs in Colorado. Between the second quarters of 1987 and 1988, employment in gold mining increased by 2.2 percent, to about 1050 jobs. The industry should experience continued growth in 1989.

The mining division as a whole is expected to lose about 700 net jobs in fiscal year 1989, followed by a 300-job increase in fiscal 1990.

The Construction Division

Construction employment declined by about 8200 jobs in 1988. This marked the fourth consecutive year that the division has suffered a net job loss. The building boom in the early 1980's, combined with two recessions in the eighties, led to a severe oversupply of office and commercial property. Since 1986, more people have been leaving the State than have been coming in, which contributed to an oversupply of residential property by 1987.

However, 1988 is expected to represent the low point for construction employment in the eighties. Several trends lead to this optimism. Total jobs increased in 1988, fueling personal income growth. Home prices in many segments of the market have fallen, leading to a 16.1-percent increase in home resales. Many corporations nationwide are looking favorably upon Denver's competitive office leasing rates, and relocations are beginning to make a dent in the high vacancy rate. Out-of-state investors are increasing their purchases of apartment buildings and homes. Although these developments will probably not stimulate new construction, they will at least contribute to a stabilization of the construction work force.

For the purposes of these forecasts, we assume that political controversy will delay groundbreaking for the new airport until fiscal year 1991 (which begins in July 1990). Construction of the airport is expected to stimulate significant increases in construction employment (as well as in other industries) in that year.

Regardless of the new airport project, the construction division in Colorado is expected to experience a very slow recovery, adding about 700 net jobs through fiscal year 1990.

The Manufacturing Division

One of the major contributors to the recovery of Colorado's economy in 1988 was the turnaround in manufacturing output. After losing 7700 net jobs in 1986 and 1987, manufacturing employers added 4700 jobs in 1988. Employment growth in manufacturing was also strong nationally, as the low value of the dollar relative to the currencies of other countries continued to open export markets for U.S. producers.

Most of the net job growth in Colorado was concentrated in five sectors. Between the second quarters of 1987 and 1988, electrical and electronic equipment (excluding computer equipment) added 1700 net jobs. Other large gains occurred in fabricated metals (+1260), food and kindred products (+1140),

printing and publishing (+600), and primary metals (+440).

The salient factors that will have an impact on manufacturing in 1989 are: 1) a continuing strong market for exports. The relative value of the dollar is expected to remain low and the economies of most of our major trading partners will remain robust; 2) increases in spending on plants and equipment, as some major industries continue to increase plant capacity; and 3) manufacturers will strive to keep increases in labor costs from exceeding productivity increases. This task becomes more difficult in the latter stages of an economic expansion, as some necessary skills become more scarce, thus driving up wages for some workers.

The last factor, along with an oversupply in some product markets (e.g., chip manufacturing and telecommunications equipment) may lead to scattered layoffs in various sectors. However, the manufacturing division as a whole is expected to add 6800 net jobs in fiscal years 1989 and 1990.

The Transportation, Communications, and Public Utilities Division (TCPU)

In 1988, the TCPU division added 2900 jobs to a 1987 employment base of 88,300. This represented substantial growth, as it equaled the number of jobs that were created in the five year period from 1983 through 1987. A look at detailed covered employment data will show more clearly where the growth occurred.

Between the second quarters of 1987 and 1988 (the most recent covered employment data available), the air transportation sector added over 2500 net jobs. However, one major carrier began significant operations cutbacks in the second half of 1988 that resulted in personnel layoffs and transfers. We believe that the recent decline in air passenger traffic will be short-lived. Denver will retain its status in the long term as one of the busiest and most important airline hubs in the U.S.

Motor freight transportation and warehousing also experienced a substantial increase, adding over 1300 net jobs between second quarter 1987 and second quarter 1988. The health of this industry reflects the improving manufacturing and trade environment in the State.

Transportation services added nearly 1200 jobs during our reference period. This sector is complementary to the tourism industry and tends to move in the same direction. It includes such services as airline and bus ticket offices and arrangement of carpools and vanpools.

Public utilities employment declined by about 240 jobs. The industry is highly dependent on population and economic growth. and probably suffered as a result of the recent migration out of

the state. Public utilities employment will probably experience only very slight growth in the next two years.

With increasing tourist activity and a gradual return to net inmigration, the TCPU division as a whole is expected to generate about 400 net jobs in fiscal 1989 and 1100 net jobs in fiscal 1990.

The Trade Division

After many years of steady, uninterrupted growth, employment in trade declined by 4100 jobs in 1986 and 1987. By the end of 1985, retail trade had reached a point of oversupply, with more operating establishments than the underlying income base could support.

Trade employment experienced a relatively strong comeback in 1988, however, as 2800 net jobs were added to the 1987 base of 348,000. Wholesale trade added 200 jobs, while the remaining 2600 were spread among various sectors of retail trade. Underlying the growth in employment was a strong increase in retail sales. By the third quarter of 1988, retail sales had increased 6.4 percent over the third quarter of 1987.

Relatively strong growth is expected in the trade division in fiscal years 1989 and 1990. Job growth in other major industries, particularly manufacturing and services, will fuel the income growth that is essential for the expansion of trade. The debt burden of Colorado consumers is relatively low, and recent increases in loan volume at banks indicate that consumers on the whole are more economically secure and confident of their ability to spend on big-ticket items. Given the low average wages in trade relative to other industries, moderate revenue increases can lead to significant job growth.

The trade division is expected to add 4200 net jobs in fiscal year 1989, followed by a 3900-job increase in fiscal 1990. Most of the impact on employment by the major new projects (i.e., Cherry Creek Shopping Center, the Centerstone project, and the opening of the Denver Convention Center) is expected to be registered in fiscal year 1991.

The Finance, Insurance, and Real Estate Division (FIRE)

After adding an average of 4100 jobs in each of the ten years prior to 1987, the FIRE division experienced declines in 1987 and 1988. The losses were especially acute in 1988, when 3500 net jobs were lost. Banking declined by 1900 jobs, while credit agencies other than banks lost 2300.

Cyclical and structural factors contributed to the downward

trend in the FIRE division in the past two years. Bank income fell in the face of weak loan demand and acute competition for deposits. Large banks initiated restructuring strategies as acquisitions led to redundant positions. The precarious financial position of several major savings and loan organizations, as well as the weak housing market, led to layoffs in this sector. The weak real estate market also led to declining employment in the real estate sector.

The FIRE division is expected to recover very slowly in the next three years. Job losses will continue in banking as institutional changes (the advent of branch and interstate banking) transform the industry. Structural job losses will be partially offset by improvement in loan demand resulting from the improving economy. Employment and real estate will grow slightly as the oversupply of office and residential space is gradually reduced. Growing incomes and an expected return to net migration into the state in fiscal year 1990 should lead to increased employment in insurance.

The FIRE division as a whole is expected to add approximately 300 jobs in fiscal year 1989, followed by 1000 new jobs in fiscal 1990.

The Services Division

Services added more jobs in 1988 (10,700) than all of the other major industry divisions combined. In the past five years, services has led all major divisions in number of jobs created (63,300) and rate of growth (21.0 percent). Major sectors of services which contributed heavily to the growth are business services (+5500) and health services (+2600). Only private educational services' growth (approximately 500 jobs) is included in the total services growth cited above. However, if public education were included in services, an additional 1300 jobs would be added to the 1988 growth.

The exceptional growth in services employment in the last five years can be attributed to several factors. The growing complexity of the business world, as well as the pronounced trend toward cost reduction, has led many businesses to "contract out" various functions that were previously performed by in-house staff. Demographic trends and an increased emphasis on education at every level has led to increasing employment in education. Advances in technology, increased longevity, and growth in the number of third-party payers has led to increased employment in the health services sector. Employment in personal services has grown as baby boomers boosted expenditures on items such as dry cleaning, hair styling, and health clubs.

Growing employment in other major industries, along with the long-term trends mentioned above, are expected to keep sevice employment growth on a relatively fast track. The division as a

whole (including public education) is expected to add 10,600 jobs in fiscal year 1989, followed by an additional 10,400 jobs in fiscal 1990.

The Public Administration Division

This division includes only the legislative, judicial, administrative, and regulatory functions of government (as opposed to the business functions, e.g., educational services or highway construction). It accounts for approximately 36 percent of government employment in Colorado. Between the second quarters of 1987 and 1988, this division added approximately 1500 jobs. This is less than the five-year average annual growth of about 1700 jobs.

The ongoing effort to control government spending will conflict with infrastructure needs in Colorado that are becoming more acute. The expected outcome is slightly less than average growth in public administration employment in the next two years. About 1500 jobs are expected to be added to the division in both fiscal years 1989 and 1990.

NOTE: There are three major conceptual differences between estimates in the above table and estimates on the previous page. The above table contains elements of employment not covered by unemployment insurance. It is done on a calendar year rather than a fiscal year basis. Finally, government employment is shown separately rather than being combined with similar private sector employment (i.e. the above table is arranged by ownership, not by Standard Industrial Classification).

SECTION II

OCCUPATIONAL INFORMATION

COLORADO AND THE UNITED STATES

This section contains a small sample of the occupational information resources that are available from the Labor Market Information Section. Additional information can be obtained by calling 894-2576 or 894-2572.

Labor Market Developments

The upcoming five-year period is expected to be better than the last one in terms of Colorado job growth. From 1989 to 1994, an additional 167,000 workers should be added to state employment rolls, compared to an addition of only 98,300 for the period 1984 to 1988. Despite the forecast improvement, the upcoming five years are not expected to be nearly as dynamic as the 1970's and early 1980's were for Colorado. During the period 1975 to 1980, over 300,000 new jobs were created in the State.

Industrial Composition

The trade and service industries are expected to generate well over half of the new job opportunities between 1989 and 1994. The goods-producing sectors of mining, construction, and manufacturing, on the other hand, together will account for only about 20 percent of the growth.

Going back to 1950, service-producing industries have always made up the lion's share of total nonagricultural wage and salary employment in both Colorado and the nation. Service-producing industries are defined to be transportation, communications, and public utilities; trade; finance, insurance, and real estate; services; and government. The share of employment attributable to these service-producing areas has also been expanding over the years. Between 1950 and 1982, goods-producing industries across the nation gained jobs at an average rate of 0.9 percent a year. During the same period, service-producing industries grew by 4.6 percent annually.

The industrial mix of nonagricultural wage and salary workers in Colorado has been somewhat different than the nation's in that historically there has been an even higher concentration of employment in the service-producing area. In 1950, the ratio of service-producing to goods-producing jobs in the State was 2.8 to 1.0 - twice the national concentration of service-producing jobs. By 1982, the ratio in Colorado had increased to 3.3 to 1.0, while the nation's had climbed to 2.7 to 1.0.

Occupational Outlook

The changing structure of industrial employment will significantly impact the occupational, economic, and social makeup of our society. The declining proportion of jobs in the goods-producing sectors will result in a generally decreasing demand for blue-collar occupations, although growth is still anticipated in that area. During the next five years, blue-collar jobs are expected to expand by 7.8 percent in Colorado. Sales and professional-technical positions, however, are expected to grow by 12.3 and 11.5 percent respectively.

The single occupation that will add the most jobs to the State's economy is retail salesperson. This group will gain over 1200 new workers during each of the next five years to reach a total employment level of nearly 54,000 by 1993. This is also the fastest-growing occupation in the nation, as nearly 86,000 salespersons are expected to be added each year until 2000.

The changing age structure of the population both nationally and in Colorado will also have an effect on occupational growth patterns in upcoming years. Between 1960 and 1970, the population cohort of those 65 years old and over grew by nearly 19 percent. During the decade of the 1970's, this growth rate increased to almost 32 percent, and it is expected that these increases will be maintained into the 1990's. This aging of the population will stimulate significant growth in jobs related to health care, geriatric social work, public housing, and mass transportation. In fact, national forecasts indicate that 12 of the 20 fastest-growing occupations to the year 2000 will be in the health services area. This includes medical assistants (growing by 90 percent between 1986 and 2000); physical therapists (up 87 percent); and home health aides (up 80 percent).

As the children of the World War II baby boomers work their way through the educational system, teaching occupations are experiencing a resurgence. The need for significant numbers of kindergarten and elementary-school teachers in upcoming years is being forecast at both the state and national levels.

Importance of Education

The educational level of the adult labor force (25 to 64 years old) is continuing to rise; this is very evident in the increase in the proportion of workers - particularly women - with four years or more of college. One out of four members of the labor force now has a college degree, and women represent 40 percent of the college-educated workers.

Occupations in which large proportions of workers have college training are among the fastest-growing, and occupations in which large proportions of workers have fewer than four years of high school are generally among the slowest-growing. College graduates are heavily concentrated in managerial and professional-specialty occupations. Three out of four professional-specialty workers, and almost half of all executives, administrators, and managers are college graduates.

Education is a key determinant of labor market success in other ways. Workers with more education earn more and are less likely to be unemployed. Earnings of job holders with four or more years of college averaged over $33,400 in 1986, while the earnings for those with four years of high school were below $20,000 and, for those with fewer than four years of high school, $16,000.

A national study showed that in March 1987, the lowest rates of unemployment were recorded by college graduates. The unemployment rate for college graduates 25 to 64 years of age was 2.5 percent, compared with 4.5 percent for those with one to three years of college, 6.3 percent for high school graduates, and 11.1 percent for high school dropouts.

It is expected that education will become more, rather than less, important in the future, and that advances in technology will require that workers receive additional training to compete for entry-level jobs alone.

SECTION IV

EMPLOYMENT SERVICE DATA

COLORADO

This section contains operations data from Colorado's Job Service Centers. Job Service applicants are presented by occupational group and race-ethnicity as well as other characteristics. An analysis of various services for the past two years is also presented, as well as operations goals for the current program year. Job Service applicant data for specific regions of the State is included in each of the specific geographic sections.

APPENDICES

A Note on the Data

The "Major Industry Division Forecasts" table for Colorado and each Service Delivery Area is based on the ES-202 data series, which is compiled by the Colorado Department of Labor and Employment based on unemployment insurance tax reports filed by employers in Colorado. The ES-202 series represents only those employees who are covered by unemployment insurance. Major categories of employment not covered by unemployment insurance are self-employed, railroad, unpaid family workers, domestic workers, and a large portion of agriculture. Employment figures in the tables entitled "Labor Market Data Summary" represent estimates of total employment as opposed to covered employment. Also, the table on page 14 presents estimates of those categories not covered by unemployment insurance.

With the exception of the table presented on page 14, all industrial analyses allocate government employees to those private sector industries where comparable economic activity is taking place. For example, public sector education is allocated to the major division of services. Public administration employment, since it has no private sector counterpart, is left to stand on its own, except on page 14, where it is included in the Government division.

The "Colorado Industry Employment Outlook" narrative and the "Labor Market Developments" narrative were written by different staff economists. Therefore, minor differences of opinion may be reflected in each of these presentations.

In an effort to hold down printing costs, we have omitted technical documentation from this publication. Users interested in methodological questions are welcome to call us at the number listed in the preface.

Eligible Labor Surplus Areas for Bidding on Federal Contracts

Background

Employers located in labor surplus areas, as classified by the U.S. Department of Labor, may be given preference in bidding on federal procurement contracts. The purpose of providing this preference is to help direct governmental procurement dollars into areas in the most severe economic need, i.e., areas experiencing the highest current rates of unemployment.

The concept of channeling federal procurement money into high-unemployment areas dates back to the Korean Conflict of the early 1950's, when government officials feared that high unemployment and low utilization of plants and equipment in some areas would lead to erosion of our mobilization base and adversely affect our production capability. There was also concern that the cost of constructing new plants and relocating workers would cause an unnecessary drain on the nation's economic resources.

The Office of Defense Mobilization studied this problem, and, in February, 1952, issued **Defense Manpower Policy Number 4 (DMP-4)**. This policy implemented the idea of directing procurement contracts to employers in labor surplus areas, but, lacking a statutory base, the program was not successful. **Public Law 95-89**, passed August 4, 1977, provided statutory authority for the labor surplus area program by amending the **Small Business Act** and authorizing federal agencies to set aside contracts for employers who agree to carry out at least 51 percent of the contract in a labor surplus area.

Following the Urban and Regional Policy Group's 1977-78 review of federal programs, additional support was given to the labor surplus program because of its potential for providing assistance to distressed areas. In March, 1978, the General Services Administration (GSA) was directed to work with all federal agencies in setting targets for placing federal contracts in labor surplus areas and to monitor the agencies' performance in meeting said targets. The GSA was further directed to submit a semiannual report detailing the agencies' progress toward effecting their goals. These directives were later incorporated into **Executive Order 12073**, signed August 16, 1978.

Public Law 96-392 ("Small Business Administration) was enacted on July 2, 1980, permanently authorizing the labor surplus area program. This act authorized federal agencies to set aside contracts when there was a reasonable expectation that offers would be obtained from a sufficient number of firms to ensure awards at reasonable prices **and** established a new priority

category of partial set-asides for small businesses located in labor surplus areas.

Section 1-103, Executive Order 12073, assigned the responsibility of classifying labor surplus areas to the U.S. Department of Labor (DOL), continuing the practice begun with DMP-4. (The DOL is also given this task under **Executive Order 10582** implementing the "Buy American" Act.)

Procedures for Classifying Labor Surplus Areas

Labor surplus areas are classified on the basis of civil jurisdictions, rather than on a metropolitan-area or labor market-area basis. This ensures that contracts are directed to **specific** localities with high unemployment, rather than to all jurisdictions within a region, some of which may not meet labor-surplus criteria. "Civil jurisdiction" is now defined as either a city or township with a population of at least 25,000, or a county. In Connecticut, Massachusetts, Puerto Rico, and Rhode Island - states in which counties have limited or no governmental functions - classifications are done for individual towns or cities.

A civil jurisdiction is classified as a labor surplus area when its average unemployment rate was at least 20 percent above the average national unemployment rate for the 50 states, the District of Columbia, and Puerto Rico during the previous two calendar years. During periods of high national unemployment (8.3 percent for all states for at least two calendar years), areas are classified as labor surplus areas if their unemployment rates for the reference period were 10.0 percent or above. A "floor" concept of 6.0 percent is used to designate labor surplus areas when national unemployment has been 5.0 percent or below during the reference period.

A civil jurisdiction may also be designated a labor surplus area when it experiences a significant increase in unemployment that is not seasonal or temporary and that is not adequately reflected in the data for the reference period. The DOL's Employment and Training Administration may grant such "exceptional-circumstance" status only if petitioned to grant such status by the employment security agency of the state involved.

The annual listing of labor surplus areas becomes effective each October 1st and remains in effect until the following September 30th. This listing is updated whenever "exceptional-circumstance" petitions have been granted by the Employment and Training Administration. The reference period used in preparing the current list is January 1986 through December 1987. The national unemployment rate during this period was 6.6 percent; therefore, the qualifying unemployment rate for labor surplus-area designation was 7.9 percent, or 6.6 percent times 1.20.

Listing of Labor Surplus Areas

Eligible Areas	Civil Jurisdictions Included
Balance of Adams County	Adams County less Arvada, Aurora, Northglenn, Thornton, and Westminster
Alamosa County	Alamosa County
Archuleta County	Archuleta County
Chaffee County	Chaffee County
Clear Creek County	Clear Creek County
Conejos County	Conejos County

COMMONLY-USED TERMS, ACRONYMS, AND ABBREVIATIONS

AFDC - Aid to Families with Dependent Children

All other nonag - nonagricultural self-employed, unpaid, family and domestic workers

Applicants available - all applicants available at end of period plus all new, new partial, and renewal applicants

BLS - Bureau of Labor Statistics

CDET - Colorado Division of Employment and Training

CETA - Comprehensive Employment and Training Act

Civilian labor force - all civilian noninstitutionalized individuals, 16 years of age or older, employed or unemployed, by place of residence

Civilian labor force participation rate - the ratio of the civilian labor force to the civilian noninstitutionalized population. Participation rates are usually published by sex-age groups and often are cross-classified by other demographic characteristics

CPS - Current Population Survey

Continued weeks claimed - the sum of weeks claimed for partial or total unemployment under the unemployment compensation program

Counseling interview - a face-to-face interview in which an employment counselor or employment-counselor trainee (1) helps an applicanr resolve problems of occupational choice or change or job adjustment and (2) obtains and records on the application and/or other appropriate applicant records one or more of the following: (a) a summary statement describing the counseling problem; (b) additional information contributing to a better definition of the problem or its solution; (c) a statement of an occupational plan or recommendation for the solution of the problem; and (d) when pertinent, a statement elicited in the course of follow-up concerning progress in carrying out the counseling plan and any further services needed.

Deregistration - denotes that a WIN registrant is being separated from the program for one of the following reasons: (1) employed after registration, off AFDC; (2) employed volunteer, not off AFDC; (3) applicant not eligible for AFDC; (4) applicant exempt from registration for work; (5) applicant sanctioned (removed for refusal to participate in program without good cause); or (6) applicant off AFDC for non-WIN-related reasons such as death, moving, etc.

DOL/ETA - Department of Labor, Employment and Training Administration

DOT - Dictionary of Occupational Titles

Eligible population - those individuals who are eligible for services under the Job Training Partnership Act, i.e., individuals whose income is below the poverty criterion

Employed - those individuals 16 years old and over who did any work at all during the monthly survey week; includes full-time, part-time, and temporary workers. Individuals are also counted as employed if they have jobs but are temporarily absent from work.

Executive Order - a formal document issued by the President of the United States (or, in Colorado, the Governor) which has the force of law. Executive Orders are compiled in Title 3 of the Code of Federal Regulations.

Filled opening - a job opening for which an applicant referred by a local Job Service office has been hired by an employer and has entered the job

HEW - the Department of Health, Education, and Welfare (now split into the the Department of Health and Human Services and the Department of Education)

Individuals placed - initial referrals, hirings, and entrance into jobs by applicants during a fiscal year. These activities together comprise "placement transactions."

Initial claim - an application for a determination of eligibility for benefits which certifies the beginning date (or the continuance into a new benefit year) of a period of unemployment

JTPA - Job Training Partnership Act

Job Development contact - the process of soliciting a public or private employer's order for a special applicant for whom the local office has no suitable opening currently on file

LMA - Labor Market Area

New applicant - a person filing an application card (Form 511A) for whom a local Job Service Center has no previously-prepared application card or whose previous application has become obsolete

Nonagricultural (nonag) wage and salary - refers to nonagricultural-establishment employment

Not in labor force - includes all civilians 16 years old and over who are not classified as employed or unemployed

Obtained employment - employment not meeting the definition of "placement" (see below)

Placement - the hiring by a public or private employer of an individual referred by the employment office for a job or an interview, provided that the employment office has completed all of the following steps: (1) prepared a job order form prior to referral, except in the case of a job development effort on behalf of a specific applicant; (2) made prior arrangements with

the employer for the referral of an individual or individuals; (3) referred an individual who had not been specifically designated by the employer, except for referrals on agricultural job orders for a specific crew leader or worker; (4) verified from a reliable source, preferably the employer, that the individual had entered the job; and (5) appropriately recorded the placement.

Referral - the act of determining that an applicant is qualified for a job opening and arranging an interview for the applicant with the employer

Renewal - the transfer of an applicant from the inactive file to active status; that is, he/she is again considered to be available for referral to job openings or employability-development services

SIC - Standard Industrial Classification, published by the Office of Management and Budget, 1972

MSA - Metropolitan Statistical Area

Testing - administering a test (standardized means of measuring an individual's possession of, interest in, or ability to acquire job skills or knowledge) to an applicant

Unemployed - those individuals 16 years of age or older without a job who are available for work and actively seeking work

WIN - Work Incentive Program
